An analysis that takes normally weeks of consulting job can be obtained in a few days.

THE PROBLEM

Customer ESG questionnaires.
Increasingly complex and demanding.

Big companies or supply chain requests.
Key to access the business

Public or private financing.
ESG increasingly required to access funding.

Regulatory & operating risks.
Regulations constantly evolving with increasing accountability.

Lack of resources or specialized personnel.
SMBs need practical and realistic solutions.

**Most SMBs (Small and Medium-Sized Businesses) do not need a complex corporate ESG system,
They need to know what is affecting them more and what to do first.**

SUSTAINABILITY PRESSURE INDEX (SPI)

The SPI measures the level of ESG pressure that a company receives from its business environment.

The methodology transforms data into priorities and actionable recommendations.

ESG-Lite+360, assisted by Artificial Intelligence, analyzes multiple internal and external factors to determine the main issues to prioritize in the organization.

Two companies with the same ESG ratio may need different priorities if they work in different sectors or supply chains with different ESG pressure (SPI).

SPI measures the external pressure. Maturity measures the organization's ability to respond to it.

AXIOS methodology empowered with Artificial Intelligence

The combination of our methodology with AI allows us to:

- ✓ In-depth and objective analysis ,
- ✓ Keep updated information,
- ✓ More prioritization precision,
- ✓ Lower administrative charge,
